

1. Where is the campus not meeting data science needs?

- Resources are available (busy!) in campus but some basic skills are needed to reach them
- Training in entry level bioinformatics (R, Perl, Python)
- Undergraduate level classes for biology majors
- Students can learn on their own/ not time efficient

2. What do you believe is needed to move data sciences to the next level? Specifically, how could a data science hub help meet that goal?

- Facilitators willing to work with students that have different levels of expertise and with diverse interests
- Lowering the activation energy. Make it easy for folks that do not do this type of work all the time.
- Entry level classes
